

Dr. Yenpo Lin, a radiologist trained in Taiwan, engaged in advanced research in musculoskeletal imaging at the Hospital for Special Surgery (HSS) in the United States. As a research fellow, he focused on MR neurography and collaborated closely with leading experts, including Dr. Darryl B. Sneag and Dr. Ek Tsoon Tan. This experience led to numerous peer-reviewed publications and reinforced his commitment to advancing MRI applications in clinical practice.

Dr. Lin is now dedicated to expanding the limits of MR neurography and musculoskeletal MRI research in Taiwan and throughout Asia. He believes these technologies hold tremendous potential for improving the understanding and diagnosis of peripheral neuropathies. By leveraging cutting-edge MRI techniques, Dr. Lin aims to transform diagnostic methods and broaden global access to high-resolution imaging worldwide.
